

GIF Editor

In this project we want to develop simple GIF editor, that can open GIF files, show all frames, allow to crop frames, remove unnecessary frames. We want to develop this editor with Qt, as backend of image processing we will use Magick++ from ImageMagick.

Project will be Open Sourced and placed on GitHub. <https://github.com/igormironchik/gif-editor>

Also we will write a small book about development process of this editor. <https://github.com/igormironchik/qt-widgets-on-real-example>
